Problem (3)

Student 1: Saachi Tamboli

Student 2: Brett Luthern

```
% Parameters

zetaP = 350; %km - perigee altitude
rp = 6371 + zetaP; % perigee radius
e = 0.1;
Omega = 195 * pi/180; %rad
i = 54 * pi/180; %rad
w = 235 * pi/180; %rad
ta = 20 * pi/180; %rad
muE = 3.986e5;
rE = 6371;

N = 30;
sigma_v = 0.1; % km/s  (= 100 m/s)
mu_bc = log(20);
sigma_bc = 0.5;
```

Part A:

```
a = rp/(1-e);
[r0_sat, v0_sat] = coe2rv(a, e, Omega, i, w, ta, muE);
r0_sat = r0_sat(:);  v0_sat = v0_sat(:);
% a) Code function [v, bc] = explosion(mu_v, sigma_v, mu_bc, sigma_bc)

function [v, bc] = explosion(mu_v, sigma_v, mu_bc, sigma_bc)
    N  = 30;
    v  = mu_v(:) + sigma_v * randn(3, N);
    bc = lognrnd(mu_bc, sigma_bc, [1, N]);
end

rng(1);
[v0_debris, bc] = explosion(v0, 0.1, mu_bc, sigma_bc);

N = 30;
V = zeros(3, N);

r0_debris = repmat(r0(:), 1, N); % map all 30 with the same position
```

Part B:

```
% b) implement a function ap = drag_acceleration(zeta, v, bc)
```

```
function ap = drag_acceleration(zeta, v, bc)
% Isothermal atmosphere drag. v in km/s, bc in kg/m², returns km/s².
    H     = 50;        % scale height [km]
    rho0  = 1e-8;      % density at zeta0 [kg/m³]
    zeta0 = 100;       % reference altitude [km]
    if zeta < zeta0
        ap = nan(3,1);
        return
    end
    rho = rho0 * exp(-(zeta - zeta0) / H);    % kg/m^3

    % Unit conversion to km/m^3 multiply by 1000 to get km/s².
    ap = -0.5 * rho * norm(v) * v(:) / bc * 1000;
end
```

Part C:

```
function ap = J2_acceleration(r)
    J2  = 0.00108263;
    muE = 3.986e5;
    rE  = 6371;
    x = r(1);  y = r(2);  z = r(3);
    rmag = norm(r);
    rz2  = (z/rmag)^2;
    factor = -1.5 * J2 * muE * rE^2 / rmag^5;
    ap = factor * [ x*(1 - 5*rz2);
                    y*(1 - 5*rz2);
                    z*(3 - 5*rz2) ];
end

ap = J2_acceleration(r0);
```

Part D:

```
